Experiment on Capturing Tools WIRE SHARK

Aim:

To understand the features of wireshark as a Packet capture tool and analyze protocol encapsulation at various layers of a Protocol Stack.

Description:

Wireshark is a network analysis tool, formerly known as Ethereal, that captures and displays network packets in real time. It provides filters and packet analysis features to impact network traffic.

CAPTURING THE PACKETS:

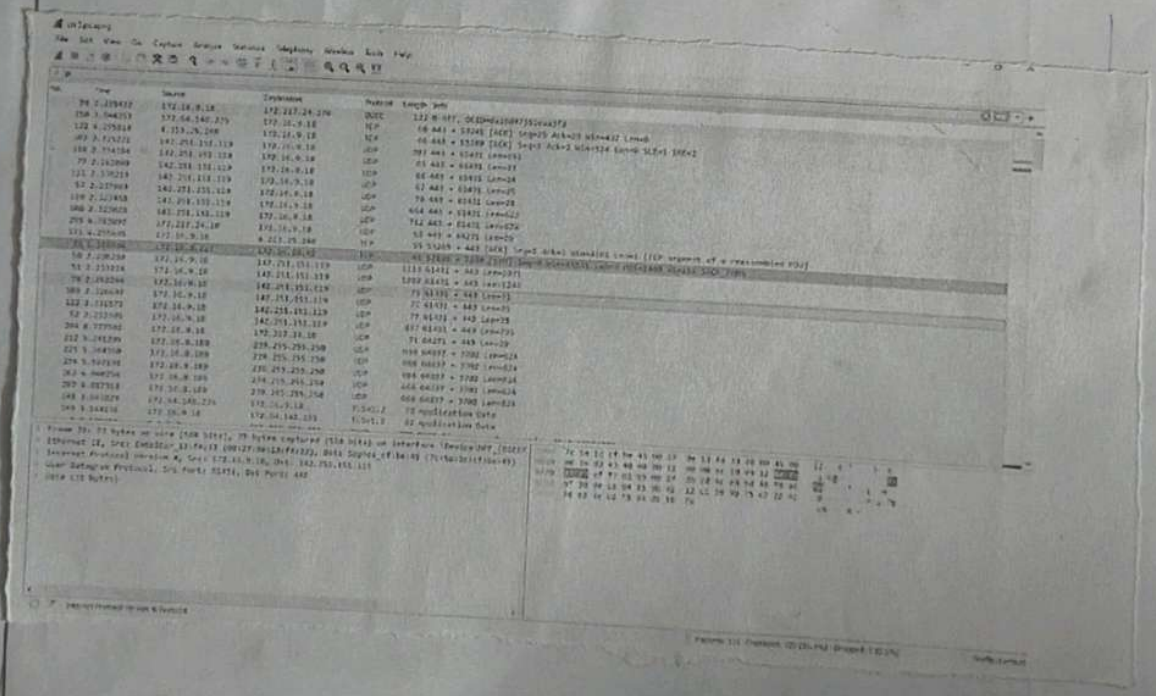

* Select Local Area Connection in wireshark.
* Go to capture option
* Select stop capture automatically after 100 packets
* Then click start capture
* Save the packets

FILTERING THE PACKETS :

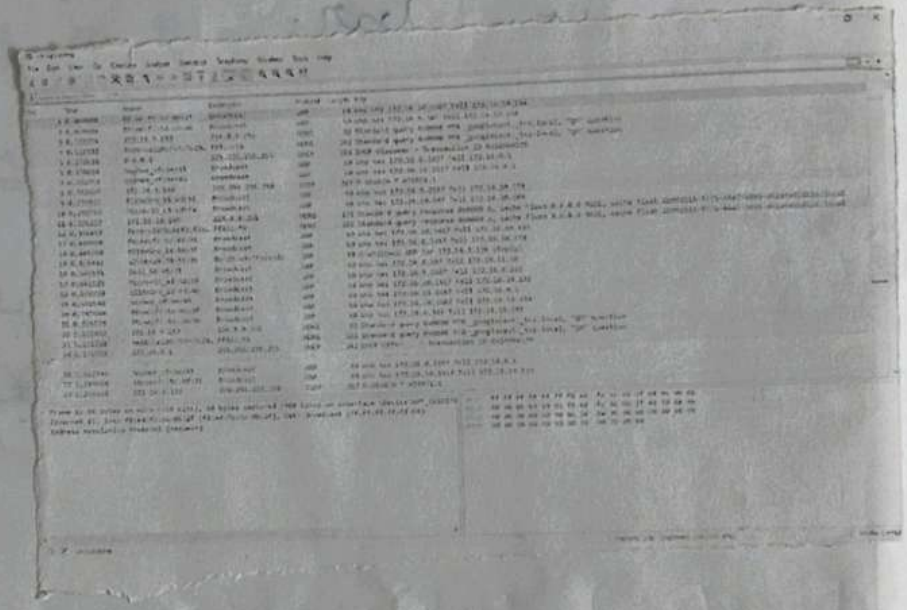

* Open wireshark, select the network interface, and capture 100 packets.

* Enter the required protocol filter (TCP, URP, ARP etc) in the filter bar.

* Select a packet to inspect its details and bytes

Exp. no :
10.09.2

Result :

Thus, the Packet was filtered and captured successfully using wireshark.
